

Term Four 2026

As the weather warms up, Spring will be the perfect time to plant for Summer harvest. Towards November we will plant tomato, capsicum and zucchini for harvest after the Summer break. As always, look out for our SAM Organic Produce Market Stall when we have abundant to share.

Grade Prep

Introduction kitchen and garden activities are centred on safety and hygiene. In the garden, children will look at what plants need to grow and sow seeds for observation. Kitchen sessions will help our little ones learn about simple flavours and how to be hygienic and safe around food.

chicl

Grade Three and Grade Five

Students will investigate how spring brings about change in the garden such as flowers and new growth. The children will plant their own seeds and assist in planting out summer crop. Garden maintenance of existing and new plants will be the focus. Cooking sessions will involve children in discussion about Food Around the World and how climate contributes to staple food being grown in certain areas. Children will cook recipes from different continents with the focus on using SAM garden harvest to incorporate into region specific recipes. What a wonderful way to encourage children to develop their palette.
